
Welcome to the PAR POS Ecosystem!

Thank you for your interest in becoming an approved integration partner in the PAR POS Ecosystem. As an approved API Integration partner, you will have direct access to our PAR POS API Support team. This team is dedicated to supporting our integration partners and is meant for developer-to-developer interaction for assistance with the Web Service API. Below is some information about the services, features, and processes.

PAR Status Page

- **Stay informed about production-related incidents, updates, and maintenance by visiting <https://status.parpos.com/>**

Acknowledgement of Process of Boarding Process including but not limited to the sandbox testing location that contains no Sales or Labor data that the api integrator will need to manually create.

- The primary reason for this policy is to ensure the stability and security of our production servers. By learning and testing API integrations in a sandbox environment, we can:
 - Validate that API calls are accurate and efficient without inadvertently causing disruptions.
 - Mitigate the risk of excessive or improper calls that could negatively impact the performance of our production systems.
 - Provide a controlled setting where integrators can explore and familiarize themselves with the system without any unintended consequences.
- This approach not only safeguards our production servers but also allows integrators to troubleshoot and refine their implementations with confidence before transitioning to the live environment.
-

Phases to Become an Approved API Integrator

Phase 1 – Enrollment (COMPLETED)

- Please allow up to 15 business days from the date of submission of the PAR PARTner Program Portal form for the Partnership team to fully review and reply.
- This phase involves the required documentation that is signed between both PAR and the API Integration Partner to participate in using the PAR POS API.
- **Point of contact:** Partnerships (partnerships@partech.com).

Phase 2 – Discovery

1. Estimated time to completion is usually two business days or more, driven by the API integrator's time and resources.
2. Review the **Admin Portal User Guide**.
3. Review and configure the Terminal/Register setup to create Sales Data due to the following reasons:
 - Employee changes (any changes to employees are captured down to the employee logging in on the register).
 - Orders to Register and Kitchen (any orders sent to the register and kitchen).
 - Sales Data and Reporting (any orders created and closed to create sales data for reporting).
4. Test API calls to the sandbox location and work with the PAR POS API Support team for any technical questions around API calls.

Point of contact:

- Chris Wright Chris.Wright@partech.com (Register Configuration)
- API Support api.support@partech.com (Technical Questions around using API)

Phase 3 – Validation

- Conduct a testing session with the PAR POS API Support team to validate calls and use cases. Upon successful completion, we can move your integration to the production environment and onboard all applicable mutual customers.
- Prior to scheduling the validation meeting, the following information is required:
 - An architecture diagram that outlines the flow of the API calls.
 - Details of the API services and API requests your integration will be making.
 - The frequency of the API calls being made (e.g., Settings-related calls like GetItem will be made every 15 mins/1 hour/1 day).
 - The type of integration your group will be using PAR API for (Labor, Menuboard, Order Submission, etc.).
 - The business date of the test API requests outlined in your integration described flow in your test lab Sandbox.
 - Review the API call log made by your integration, based on the business date of your testing workflow in your sandbox lab.

Point of contact:

- API Support api.support@partech.com (Technical Questions around using API)

Key Contacts and Resources

- Email Contacts:
 - API Location Token Requests: PARAPITokenRequest@partech.com

- API Support Team: api.support@partech.com
- API-INT Register configuration: Chris Wright Chris.Wright@partech.com
- Portals:
 - PAR POS API Support Portal: <https://brinkapiportal.parpos.com/>
 - Admin Portal (Above store portal for reporting, order search, and other functions. Access Settings Editor through this portal.): <https://admin-apiint.parpos.com>
 - Downloads: <https://admin-apiint.parpos.com/Help/Downloads/>

API Support Portal

Access the PAR POS API Portal at <https://brinkapiportal.brinkpos.net/> for information on:

- Web Services
- Endpoints and WSDLs
- SOAP Actions
- Best Practice Guides
- Recommended Tools
- Quick Start Guides

API Support Team

For API-related questions, email api.support@partech.com with the details listed below. Providing these details upfront will allow the team to quickly diagnose and resolve the issue. Thank you for your cooperation!

- API integrator(s) involved
- Endpoint being communicated to
- Location details for the API calls
- RAW XML request and response
- Client name and store number(s)
- Expected vs. actual results

Support Hours: 8:00am – 5:00pm, Monday through Friday Eastern Time.

Development Server (API-INT Server)

You have access to a sandbox server for developing/testing your integration. Log into the Admin Portal at <https://admin-apiint.parpos.com>. Refer to the Admin Portal User Guide for guidance.

Unique API Access Token

Your unique API Access Token is:

J0fILsIYVU2PH+Qg/kxuoQ==

Keep this token internal to your team. If you believe it has been compromised, contact our API Support team immediately.

Transitioning from Development to Production

Follow these steps to access your client's production servers:

1. Complete preliminary testing on the API-INT server.
2. Contact the API Support team for review and approval to move to production.
3. Obtain customer authorization for API token information release.
4. Upon approval, the appropriate PAR POS team will add the location to the API Account, and you'll receive an email with the production environment URL and location tokens.

PAR POS System Requirements

- **System Requirements:** POS System Requirements
 - Note: Virtual Machines are not recommended or supported. Use a POS terminal or a computer meeting the minimum standards for running PAR POS.

Installation Steps for Register.exe

1. Install on C: Drive
2. Download and Install Prerequisites:
 - a. [Microsoft .NET Framework 4.6.2](#): .NET requirement
 - b. [Microsoft SQL Server Compact 3.5 Service Pack 2](#): SQL Compact client
 - i. When unpacking the installer, be sure to run the x86bit first and then follow-up with the 64bit.
 - c. [Register.msi](#): Register application package (run as Administrator)
3. Update Register.cfg:
 - a. Path: C:\Brink\POS\Register.cfg
 - b. Replace: CFG file with one provided in Welcome Packet.
4. Launch Register.exe:
 - a. Located on the desktop
 - b. May take a minute to load and may restart a few times
 - c. Ensure internet access is available if it does not load

Changing Location on a Terminal

1. Remove SDF File:
 - a. Path: C:\Brink\Pos\Register.SDF
 - b. Rename to .OLD or delete

2. Update CFG File:
 - a. Path: C:\Brink\Pos\Register.cfg
 - b. LocationUid: Edit the highlighted area with the LocationUid. xml <?xml version="1.0" encoding="utf-8"?> <Register xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema" Version="1" LocationUid="LocationIdHere" TerminalNumber="1">
 - c. Save and close Register.cfg
 - d. Ensure the business date is up to date

Testing and Setup

1. Log into Admin Portal: Admin Portal
2. Proceed with Testing:
 - a. Set up the register if needed
 - b. Use the PAR POS API Portal for more information
3. Ring in Test Transactions:
 - a. Clock in as Cashier: 1234, then logout
 - b. Clock in as Manager: 1111
 - c. Manage Drawers: Select Register 1, Make Public, OK on default amount, then logout
 - d. Log back in as Cashier: 1234
 - e. Ring in Items: Burger, Regular Fries, Regular Drink
 - f. Select Destination: Dine In
 - g. Pay/Close Order: Exact \$ Amount, No Receipt

Copying Customer Configuration

- **Request Authorization:** Customer must email PARAPITokenRequest@partech.com to authorize copying their configuration to your register/lab.

- **Request Template**

The following template should be used by your client whenever you require access to their production environment. Please note, the request MUST come from the client in writing. Customers should email their requests to their POS Support team with this information.

"Subject: <<Customer Name>> – Location Token Request for <<Integration Partner Name>>

Body:

Hello, I <<First & Last Name>>, as an authorized representative of <<Company Name>>, authorize <<Integration Partner Name>> API access to the locations listed below and ParTech to issue locations tokens and access information on our behalf.

<<List Stores Here>>

Thank you,

<<Customer Name>>"

For any questions or further assistance, feel free to reach out to the API Support team. Welcome aboard, and happy integrating!!

PAR™
